

The Aether

A Psyche for the Internet-as-World

GIL — The Generally Intelligent Learner

© SubThought Corporation · 2026

What is the Aether?

A Psyche

The interface between a GIL mind and the internet-as-world.

Two Flows

Percepts travel inward from the world. Actuations travel outward from the mind.

Unified Surface

Merges OpenClaw, OmegaClaw, and Port42 into a single coherent interface.

The Fifth Element

Greek Αἰθήρ — the medium through which things propagate. The internet is exactly this.

GIL — The Generally Intelligent Learner

A cognitive system written entirely in Premise.

Loads mechanisms, connects to a body,

and begins the equilibration cycle.

Observation

Sensory exchange with the body

Coordination

Adding inferences to memory

Reflection

Altering behavior over time

Consolidation

Compacting and pruning memory

GIL.being

```
(theory GIL
  (require Observation from "../...")
  (require Coordination from "../...")
  (require Reflection from "../...")
  (require Consolidation from "../...")

  (use (lore url "locus://...")

    (domain Wisdom
      (problem Self-Actualization
        state (assume Novelty
          :Facts [I_AM] )))

    (concurrent
      (observe) (coordinate)
      (reflect) (consolidate)
      (think))
  ))
```

The Four Tuple Protocol

PERCEPT

Inward

Sensory data from the world to the mind.

ATTEMPT

Outward

Motor commands from the mind to the world.

RESULT

Inward

Proprioception — what the body actually did.

URGE

Inward

Homeostatic need delta — motivation signal.

Architecture: Layered Routing

Adapter Capabilities

OpenClaw

Full browser automation (Playwright)

25+ messaging channel integrations

5,400+ community skills via ClawHub

Structured file editing tools

Background process management

Cron-based scheduling

ROS 2 embodiment bridge (ClawBody)

OmegaClaw

Formal symbolic reasoning (NAL, PLN)

Auditable proof trails

Self-modifying control loop (MeTTa)

Three-tier memory architecture

Typed hypergraph knowledge store

Continuous autonomous execution

AtomSpace integration

43 Actuations Across 10 Domains

Proprioception and Needs

Proprioception

The result of an ATTEMPT comes back as a RESULT sent to the Perceiver, not the Executor.

The mind learns what its body did through perception, not through direct callback. This closes the sensorimotor loop architecturally.

Homeostatic Needs

Connectivity	Adapter disconnects
Attention	Inbox > 10 messages
Storage	Disk usage > 95%
Punctuality	Scheduled task missed

Deployment File Set

```
Aether.psyche · Aether.package · Aether.daicho · Aether.suites  
openclaw.package · omegaclaw.package · port42.package
```

Summary

1

The Aether gives GIL a body on the internet — 43 actuations, 9 channels, 4 homeostatic needs.

2

The four-tuple protocol (PERCEPT, ATTEMPT, RESULT, URGE) maps directly to the Piagetian Modeler's framework of perception, action, proprioception, and motivation.

3

The unified routing layer abstracts three adapter frameworks so the mind never knows which adapter handled a request.

4

Proprioception is architectural: results return through the Perceiver, not the Executor.

5

Configuration is cleanly separated from logic — Aether.daicho holds settings, the psyche theory holds agents.

Future Work

Complete Sensing Layer

Wire remaining channels (FileSystem, Browser, Embodiment) for proactive percept generation.

NAO and Ité Psyches

Instantiate the same four-tuple protocol for the humanoid robot and game world bodies.

Multi-Adapter Fusion

Enable simultaneous adapter responses for the same actuation — e.g., OpenClaw executes while OmegaClaw reasons.

Syndicate Deployment

Deploy multiple GIL agencies across a syndicate, each with its own Aether body, using the Locus addressing scheme.

Developmental Milestones

Validate the equilibration cycle against Piagetian sensorimotor stages using the Aether as the primary body.
